**Abstract:** The type specimens (all current categories) of Elateridae deposited in this Museum are catalogued: twenty-four names are recorded. The specific names are alphabetically entered a single list, followed by the generic ones in their original spellings. An account of the types actually here deposited follows, with a description of all the labels. Later combinations, and synonyms are mentioned insofar they are known to the authors. In order to assist in future research, two further lists are added: 1. of specimens labeled as types of names not found in the bibliography, and probably not published, and 2. of specimens labeled as types but not originally included in a type series, published or not after the original description (mainly 'allotypes').

**Keywords:** Type specimens, Elateridae, Coleoptera, Insecta.

**Resumen:** Catálogo de los tipos de Elateridae (Insecta, Coleoptera) depositados en el Museo Argentino de Ciencias Naturales, Buenos Aires. Se catalogan los ejemplares tipo de todas las categorías aceptadas de Elateridae depositados en este museo. Se registran veinticuatro nombres. Los nombres específicos se ordenan alfabéticamente; a estos siguen los genéricos, con la grafía original. Sigue la enumeración de los tipos efectivamente aquí presentes, con descripción de todos sus rótulos. Se mencionan las combinaciones ulteriores, y los sinónimos cuando son conocidos por los autores. Para facilitar futuras investigaciones, se agregan otras dos listas: 1. de ejemplares rotulados como tipos, de nombres no hallados en la bibliografía y probablemente no publicados, y 2. de los ejemplares rotulados como tipos, pero no incluidos originalmente en una serie típica, publicados o no después de la descripción original (principalmente 'alotipos').

**Palabras clave:** Ejemplares tipo, Elateridae, Coleoptera, Insecta.

### INTRODUCTION

A catalog of the type specimens (all current categories) of Elateridae housed in the Entomological Division of this Museum is presented, referred to twenty-one available names; the specific names are alphabetically entered in a single series, each one being followed by the generic one, all with the original spellings; a brief bibliographic quoting follows, as well as a list of the specimens examined, if these were mentioned. An account of the type specimens actually here housed follows, with a description of all the labels. In geographic references, if the country is not mentioned, Argentina is meant. Later

nomenclatural or taxonomical changes are added, insofar they are known by the authors. Some comments are added in a *note*, as well as the current subfamilial and tribal assignation.

Most of the species dealt with were described by Schwarz (1896, 1900, 1904, 1906), some others by Burmeister (1875), Candèze (1896), Brèthes (1920) and Golbach (1979, 1987). The systematic and nomenclatural updating follows Bouchard *et al.* 2011.

For the identification of types not formally designated in the original publication, evidences from the labels or from the specimens are considered (art. 72.4 of the International Code of Zoological Nomenclature, 1999). If no types were

designated, and the amount of specimens examined was not stated, it is assumed that they are a series of syntypes (recommendation 73F of the Code), sometimes 'sole syntypes'. Some specimens in the collection are labeled as types of names not found in the literature, and assumed not to have been published. These names are probably not available in the sense of the Code; however, in order to assist in future research, they conform a separate list. Specimens labeled as types, but not included in the original publication, and specimens designated as types later, published or not, cannot be accepted as pertaining to the type series; however, also in order to assist in future research, they conform a further, separate list.

In his collection, Carlos Bruch used to copy on own labels (most of them with a red frame, a few with a green frame) the names of the species described by other authors, very often without adding an original label. Some specimens in the Bruch collection are labeled 'Cotypus': we include them as syntypes or as paratypes, depending on the context. All the specimens labeled as types bear a small inverted label, as "MACN-En 0000", referred to the data base of the collection of the Museum, managed after "Aurora" (Rodríguez 2007-2011).

This Museum is identified with **MACN**. Other repositories are identified as follows: **CBC**, Carlos Bruch coll, in MACN; **IFML**, Instituto Fundación Miguel Lillo, Tucumán, **HB**, Hermann Burmeister coll, in MACN.
