Abstract: The type specimens of Curculionoidea (Apionidae, Brentidae, Anthribidae, Curculionidae, Platypodidae, and Scolytidae) from the Museo Argentino de Ciencias Naturales (MACN), corresponding to all current categories, are herein catalogued. A total of 344 specific and subspecific names are alphabetically recorded, for their original binomina or trinomina, and spellings. Later combinations and synonyms are mentioned, as well as the information of all the labels associated to the specimens. In order to assist future research, three further lists are added: 1. specimens deemed to be deposited at MACN but not found in the collection; 2. specimens labeled as types of species which descriptions have probably never been published (non available names); and 3. specimens of dubious *status*, because the information on the labels does not agree with that of the original publication.

Key words: Type specimens, Curculionoidea, Coleoptera, Insecta.

Resumen: Catálogo de los tipos de Curculionoidea (Insecta, Coleoptera) depositados en el Museo Argentino de Ciencias Naturales “Bernardino Rivadavia”, Buenos Aires. Se catalogan los ejemplares tipo de Curculionoidea (Apionidae, Brentidae, Anthribidae, Curculionidae, Platypodidae y Scolytidae) depositados en el Museo Argentino de Ciencias Naturales (MACN), correspondientes a todas las categorías de tipos aceptadas. Se registran 344 nombres específicos y subespecíficos, que se ordenan alfabéticamente según sus binomios, o trinomios, y grafías originales. Se mencionan las combinaciones posteriores y los sinónimos conocidos, y se brinda una descripción detallada de todos los rótulos del material mencionado. Para facilitar futuras investigaciones se agregan otras tres listas: 1. ejemplares tipo supuestamente depositados en el MACN pero no hallados en la colección; 2. ejemplares rotulados como tipos, pero cuyos nombres específicos o subespecíficos son no disponibles, pues sus descripciones probablemente no han sido publicadas; y 3. ejemplares rotulados como tipos pero cuyo *status* como tales es dudoso pues no hay concordancia entre los datos de los rótulos y los de la publicación.

Palabras clave: Ejemplares tipo, Curculionoidea, Coleoptera, Insecta.

INTRODUCTION

A catalog of the type specimens of Curculionoidea deposited at the Entomology Division of the Museo Argentino de Ciencias Naturales (MACN) is herein presented. It includes 344 specific and subspecific names in alphabetical order, according to their original spellings. A brief bibliographic quoting, the information content of all labels associated to each type, as well as later nomenclatural or taxonomical changes have been added.

The classification of Curculionoidea follows Lawrence & Newton (1995) and Alonso-Zarazaga & Lyal (1999). Herein we record type

specimens of the families Apionidae, Brentidae, Anthribidae, Curculionidae, Platypodidae and Scolytidae. The latter two families are probably part of Curculionidae (Marvaldi et al., 2002), however, we have considered them separately for practical purposes.

For checking available and valid names, synonymies and new combinations of the American Curculionidae and Apionidae we used the checklist of Wibmer & O'Brien (1986, 1989b); for Scolytidae and Platypodidae, the catalogs of Wood & Bright (1992), and Bright & Skidmore (1997, 2002); for Anthribidae, the catalog of Rheinheimer (2004), and for Brentidae, Sforzi & Bartolozzi (2004).

Most species herein recorded belong to Curculionidae and were described by Alphonse Hustache (more than 150 spp) based on specimens sent to him by Carlos Bruch. Other authors that contributed with numerous types are G. Kuschel (36 spp), J. Brèthes (31 spp), K. Heller (22 spp), L. Béguin-Billecoq (17 spp) and M. J. Viana (16 spp).

For the specimens not formally designated in the original publication, evidences from the labels or from the specimens have been taken into account for considering them as types (art. 72.4 of the International Code of Zoological Nomenclature, 1999). When holotypes were not designated, or when the number of specimens of the type series was not stated, the specimens were considered syntypes (recommendation 73F of the Code).

The specimens labeled as types but not found in the literature are not available in the sense of the Code, however, in order to assist future research we mention them in a separate list. Other two lists have been compiled for missing types (deemed to be housed at MACN but not found) and for dubious types (specimens labeled as types but not regarded as such, because the information on the labels does not agree with that of the original publication).

Hermann Burmeister did not label the type specimens of his collection, instead, he used to attach to the bottom of the drawer where the specimens were stored a label with the name of the species, including a vague geographical indication, such as "Rep. Argent." for Argentina, or "Patag." for Patagonia. This is why the type status of these specimens is so hard to be certified. Carlos Berg, the follower of Burmeister as the director of the Museum, used to attach a tiny label, with "Typus" printed with red ink. On the other hand, Carlos Bruch used to copy the names of the species described by other authors, to his own labels (several of them with a red frame, some with a green frame or without frame). He also used to attach a small piece of paper with the name of the species, cut from a handwritten letter from the author. The specimens of the Bruch collection labeled as 'Cotypus' have been considered as syntypes or as paratypes, depending on the context.

All the specimens labeled as types, or deemed to be types, bear a small reversed label "MACN-En 0000", that refer to a code used for the data base of the Museum collection, managed after "Aurora" (Rodríguez 2007/2012). We thank Mariel Guala for kindly help in managing "Aurora".

The collections at the **MACN** kept separately from the main collection are identified as follows: **CBC**, Carlos Bruch coll., and **HBC**, Hermann Burmeister coll.
